

MultiECUScan OBD II

Software Multiecuscan

Do you need to :-

Perform a proxy alignment following an air bag module replacement, or

Read and reset engine warning light faults, or

Need to remap your comformatic gearbox / perform an actuator base adjustment routine, or

Bleeding brake cylinder by pulsing the internal solenoids, or

Any number of other settings / changes.

I have a copy of the software along with all the necessary cables loaded on a laptop which I am willing to lend to any fun member who needs it.

It is the Gendan Super Plus Package and the laptop is a Panasonic Toughbook CF-20 which can work as a laptop or a tablet and has power cables from mains and 12v accessory socket, so everything you may need.

I bought it to perform a proxy alignment following the dreaded air bag failure, and would like to save other Fun members from having to fork out.

A few users have borrowed it and found it useful.

If you want to borrow the kit, just message me or email me at DaveThexton@sky.com with your address and I will send it out Royal Mail special delivery which is tracked, and just ask that you return it in the same way once you have used it.
